

J SUPREME TECH • TARGET AUDIENCE PLAYBOOK • 2026-06-13

Who we're talking to.

What to say.

How to show it.

Four audience segments for the Supreme Suite bundle deal campaign. Each profile covers: demographics, psychographics, pain points, headline hooks, lingo, visual direction, content format, photo/video brief, CTA, and posting cadence.

The Campaign Premise

The Supreme Suite is a ready-made SaaS system (booking, CRM, operations, AI chatbot) that ships with a branded website — one monthly subscription, starting from \$49 USD/mo. The 3-day free trial is the entry point for every ad. Each creative speaks directly to where the prospect is right now — not a generic pitch.

The Busy Owner

Already running. Needs it off their plate.

The Tech-Tired

Tried to build it themselves. Done.

The New Starter

Starting out. Wants to do it right.

The Remote Op

Runs a JA business from overseas.

How to use this playbook

- Each persona gets its own creative (feed post + story) from this campaign.
- Match copy, visual, and CTA to the persona — don't mix hooks.
- Run each persona as a separate ad set and track which converts best for each business type.
- Rotate personas weekly — don't run all four simultaneously or the message dilutes.
- The 3-day free trial is the universal CTA. Never ask for a card upfront.

The Busy Owner

Who they are: A local business owner who built their operation manually and is now at capacity. They're handling every booking personally — by phone, WhatsApp, or DM. They know they need a system but haven't had the time or energy to set one up.

Demographics: 25–45, Jamaica or Caribbean. Courier operator, salon owner, tour guide, restaurant manager, mover. Turning over J\$500k–\$3M/mo but running it all through their phone.

Pain Points

- Taking bookings at midnight on a personal number
- Revenue drops when they go offline
- Customers complain about slow replies
- Can't hire or delegate because nothing is documented
- No idea what they've earned until they count manually

Hooks & Headlines

"You're the booking system right now. That needs to change."

"Every missed call is a missed booking."

"You built something real. Now let it run without you in the middle."

"Your AI doesn't sleep, go on lunch, or have a bad day."

Lingo to Use

"Sort it out", "run things properly", "get it off my plate", "stop losing money", "I can't be available 24/7"

Visual Direction

Dark, authoritative, high-contrast. Show the contrast — chaotic WhatsApp thread on the left, clean dashboard on the right. Or: a phone showing the booking form with no human in the loop.

Content Format & Platform

Instagram Feed (static) · Stories · Reels showing the before/after · WhatsApp status

Photo / Video Brief

Behind-the-scenes footage of their type of business (courier van, salon chair, tour van) — then contrast with a phone showing the system running cleanly.

CTA

"Get the system. Try it free for 3 days."

Posting Frequency

3× / week — Monday (pain post), Wednesday (proof/demo), Friday (CTA)

The Tech-Tired Founder

Who they are: A technically-minded founder who has already tried to build their own system — Zapier, Glide, Notion, Airtable, or hired a freelancer who went quiet. They know exactly what they want. They're just exhausted from building it themselves.

Demographics: 22–38, Jamaican diaspora or Caribbean tech-adjacent founder. Understands APIs, has a Zapier account, may have a Notion workspace. Running a side hustle or early-stage business alongside a day job.

Pain Points

- Zapier workflows breaking on weekends
- Hitting Glide's free tier limit
- Developers who ghost after the deposit
- Notion 'CRM' that doesn't scale
- Spending weekends maintaining a system instead of growing the business

Hooks & Headlines

"The Zapier broke again, didn't it."

"We built the thing you've been trying to build. Log in."

"Stop building the system. Just use it."

"6 weekends. 3 tools. Still not working. We did it in one."

Lingo to Use

"API", "integration", "automate", "it broke", "the workflow", "the free tier", "ghosted", "I just need something that works"

Visual Direction

Dark, technical aesthetic. Crossed-out logos of failed tools (Zapier, Glide, Notion) → clean system dashboard. Or a code/API error screen → clean booking form.

Content Format & Platform

Instagram Feed · Twitter/X · LinkedIn (for the diaspora professional) · Reels showing the switch

Photo / Video Brief

Screen recording style — show the Zapier error, then cut to the clean dashboard. Or flat-lay with a laptop showing the system.

CTA

"3-day free trial. No setup needed. Just log in."

Posting Frequency

2–3× / week — very direct copy, short captions, no fluff

The New Starter

Who they are: Someone who is starting a business — or about to. They want to do it right from the beginning. They've seen other businesses struggling with manual systems and want to avoid that entirely. They're motivated, aspirational, and willing to invest in their foundation.

Demographics: 18–32, Jamaica, Caribbean, or diaspora. First venture. Could be any industry — courier, beauty, tours, food. Has a name, maybe a logo, possibly an IG page. Hasn't taken their first paid booking yet.

Pain Points

- Afraid of looking unprofessional when they launch
- Doesn't know how to set up a booking system
- Worried customers won't take them seriously
- Starting from zero with a small budget
- Doesn't want to figure out a dozen separate tools

Hooks & Headlines

"You haven't opened yet. Set the system up first."

"Look established from minute one."

"Your first customer deserves a real booking experience."

"Most businesses start scrappy. You don't have to."

Lingo to Use

"launch", "start right", "look professional", "first customer", "set it up properly", "do it the right way"

Visual Direction

Clean, light, aspirational. Fresh energy. Show a phone with a polished booking page — feels like an established business. 'Before you open' framing.

Content Format & Platform

Instagram Feed (light posts) · Stories with step-by-step setup · Reels showing launch in 60 seconds

Photo / Video Brief

Clean flat-lay: laptop open to the dashboard, notepad with a business name, branded coffee cup. Or a Reel of someone setting up their system and going live — 60 seconds from zero to live booking page.

CTA

"Launch with the system already in place. 3-day free trial."

Posting Frequency

2× / week — Monday (inspiration/aspiration) + Thursday (practical how-to)

The Remote / Diaspora Operator

Who they are: A Jamaican national or Caribbean person living overseas — UK, USA, Canada — who owns or co-owns a business back home. They manage it remotely and their biggest challenge is visibility and trust. They can't be on the ground every day and need a system that keeps them in control.

Demographics: 28–50, UK/USA/Canada-based Jamaican or Caribbean national. May be sending remittances back, or building an asset back home. Business runs in Jamaica but decisions are made from overseas. Typically a courier, car wash, property rental, or food business.

Pain Points

- Can't see what's happening in real time
- Relying on a family member or trusted employee who may not report accurately
- Revenue doesn't match what customers paid
- Customers complain but the complaint never reaches them
- Can't respond fast enough from a different time zone

Hooks & Headlines

"Your business runs in Kingston. You're in Florida. Your dashboard has the whole picture."

"Run a Jamaican business from anywhere."

"You don't need to be there. You need to see everything."

"Your AI handles the front desk. You see every result."

Lingo to Use

"back home", "from here", "in real time", "my people", "see what's going on", "stay in control", "trust the system not a person"

Visual Direction

Dark, high-stakes, geographic contrast. Phone/laptop split showing a Kingston street + a clean dashboard. Or a map showing JA → overseas with the system connecting them.

Content Format & Platform

Instagram Feed · Facebook (older demographic skews higher here) · WhatsApp status in diaspora groups · Reels showing the dashboard from a phone abroad

Photo / Video Brief

Lifestyle shot: someone on their phone or laptop in an overseas setting (UK weather, US suburb) with the JA business dashboard visible on screen. Or a Reel showing them booking a job remotely and it appearing on the driver's phone in Kingston.

CTA

"Stay in control from anywhere. Try it free for 3 days."

Posting Frequency

2× / week — peak engagement Sunday + Wednesday for diaspora (UK/US time zones)

Platform strategy by audience

AUDIENCE	PRIMARY	SECONDARY	BEST TIME
A1 · Busy Owner	IG Feed + Reels	WhatsApp Status	Tue/Thu 7–9pm JA
A2 · Tech-Tired	IG Feed + Twitter/X	LinkedIn	Mon/Wed 8am–10am
A3 · New Starter	IG Feed + Stories	TikTok	Mon/Thu 6–8pm JA
A4 · Remote Op	IG Feed + Facebook	WhatsApp (diaspora groups)	Sun/Wed 6pm UK/US time
